

AutoPulse.ai - SOLD PENDING Workflow

Developer Implementation Specification | Version 1 | September 2026

CORE STATE LOGIC

Sales Visit -> SOLD PENDING -> **SOLD - DELIVERED** or **CLOSED LOST**

1. Purpose

SOLD PENDING is an active deal-completion and customer-engagement status used after a Sales Visit when the dealership records the deal as sold but the vehicle has not yet reached SOLD - DELIVERED. AutoPulse keeps the customer engaged and supported throughout the pending period without implying that the customer is delaying the transaction.

SOLD PENDING is not an unsold lead. It must not enter the standard New Lead / No Contact / Day 1-90 cadence while this status is active.

2. Only Two Outcomes

- **SOLD - DELIVERED:** Vehicle is delivered. Stop SOLD PENDING follow-up and transition to the appropriate post-sale lifecycle.
- **CLOSED LOST:** Pending transaction will not be completed. Stop SOLD PENDING follow-up and close the opportunity as lost.
- **No automatic outcome based on time.** SOLD PENDING remains active until an authorized dealership user selects one of the two outcomes.

3. Global Omnichannel Rule

Every SOLD PENDING follow-up = CALL + TEXT + EMAIL.

- At each scheduled follow-up, AI sends an appropriate SMS and email.
- Start a 60-minute connection timer after AI outreach.
- If meaningful customer contact occurs within that hour, cancel/prevent the human call task.
- If no meaningful connection occurs within 60 minutes, activate a human call task.
- Call task supports Click-to-Call where available and requires an outcome.
- All channels remain subject to valid data, opt-out/suppression, staff schedules, and the AutoPulse Compliance Engine.

4. Follow-Up Cadence

Phase	Cadence	Channels	Purpose
Weeks 1-4	1x/week	Text + Email + Call	Stay engaged, offer support, surface questions or needs.
After Week 4	Every 2 weeks	Text + Email + Call	Maintain engagement for as long as status remains SOLD PENDING.

No Day-90 expiration: the every-two-week cadence continues until SOLD - DELIVERED or CLOSED LOST.

5. Weeks 1-4 Engagement Strategy

Week 1 - Documentation + Questions

Ask whether the customer has provided everything their salesperson has requested and whether they have any questions regarding their vehicle purchase. Never invent or assume a specific missing document.

Week 2 - Support Check-In

Ask whether there is anything the customer needs from their salesperson or dealership and whether any questions have come up.

Week 3 - Purchase / Vehicle Check-In

Offer help with questions about the vehicle or purchase process. When verified and relevant, this may include trade, insurance, paperwork, vehicle features, accessories, or other known deal-specific items. Do not introduce issues that are not known to apply.

Week 4 - Relationship Check-In

Use a warm, neutral check-in designed only to stay in front of the customer and keep the relationship active. **Do not imply that the customer is holding up or delaying the transaction.**

Recommended intent: "We just wanted to stay in touch while your purchase is being completed. Do you have any questions about your vehicle or is there anything our team can help you with at this time?"

6. After Week 4 - Every Two Weeks

After the Week 4 touch, schedule one SOLD PENDING follow-up every two weeks for as long as the opportunity remains SOLD PENDING.

- Ask whether the customer has questions about the vehicle or purchase.
- Ask whether there is anything they need from the dealership or salesperson.
- Where appropriate, ask whether they have everything their salesperson has requested.
- Use known conversation/deal context to avoid repetitive or irrelevant messaging.
- Never pressure the customer to take delivery or imply the customer is responsible for the pending status.
- Never automatically close or downgrade the opportunity because of age.

7. AI Conversation & Escalation Rules

- Read the opportunity, conversation history, notes, vehicle information, and verified deal context before every touch.
- Messages must sound like a continuation of an existing purchase relationship, not a new sales solicitation.
- Do not repeatedly ask questions already answered.
- Never fabricate missing documents, delivery dates, vehicle status, financing status, approvals, dealership actions, or reasons the deal is pending.
- Answer questions directly when verified data supports the answer.
- Questions requiring salesperson, manager, finance, title, trade, insurance, or other human review must be routed/escalated with context.
- Any customer reply must update the record and cancel stale queued communication that no longer makes sense.

8. Human Call Task Logic

- Each scheduled follow-up sends AI text + email first.
- Set a call-task checkpoint 60 minutes later.
- Meaningful contact before the checkpoint cancels/prevents the call task.
- No meaningful contact activates the call task for the assigned human.
- If the checkpoint falls outside the employee schedule or permitted calling window, move it to the next eligible period.

- Immediately before activation, re-check status so no stale call task fires after SOLD - DELIVERED, CLOSED LOST, opt-out, or another controlling change.

9. Status / Response Router

Event	AutoPulse action
Customer question AI can answer	Answer from verified context; record interaction; remain SOLD PENDING.
Human assistance needed	Create appropriate escalation/task with question and context; remain SOLD PENDING unless dealer changes status.
Customer provides requested information	Record/update supported data; route to appropriate dealership user; remain SOLD PENDING.
Dealer records delivery	Immediately -> SOLD - DELIVERED; cancel all future SOLD PENDING actions.
Dealer determines transaction is lost	Immediately -> CLOSED LOST; cancel all future SOLD PENDING actions.
No response	Continue weekly or every-two-week cadence.

10. Stop Conditions

- Status -> SOLD - DELIVERED.
- Status -> CLOSED LOST.
- A channel-specific or broader opt-out/suppression blocks that communication.
- A new controlling AutoPulse workflow/event supersedes SOLD PENDING.

A channel-specific suppression removes the prohibited channel only unless policy requires broader suppression; other permitted channels continue where allowed.

11. Recommended Developer Fields / Events

- sold_pending_started_at; sold_pending_week_number / phase; last_sold_pending_followup_at; next_sold_pending_followup_at
- last_meaningful_contact_at; pending_call_checkpoint_at; assigned_salesperson_id / assigned_agent_id
- current_status; status_changed_at; escalation_type / escalation_owner / escalation_status
- outbound_message_id / email_id / call_task_id
- Events: SOLD_PENDING_STARTED, SOLD_PENDING_FOLLOWUP_DUE, SMS_SENT, EMAIL_SENT, CUSTOMER_REPLIED, MEANINGFUL_CONTACT_RECORDED, CALL_CHECKPOINT_REACHED, CALL_TASK_CREATED, CALL_COMPLETED, ESCALATION_CREATED, SOLD_DELIVERED, CLOSED_LOST, OPT_OUT_RECEIVED, STATUS_CHANGED.

12. Developer Acceptance Tests

- Selecting SOLD PENDING starts this dedicated workflow and stops incompatible lead follow-up.
- Exactly one scheduled follow-up occurs each week for Weeks 1-4.
- After Week 4, follow-up occurs every two weeks until status changes.
- Every follow-up attempts all available permitted channels: text + email + human call.
- Human call task activates 60 minutes after AI outreach only if meaningful customer connection has not occurred.
- Meaningful contact before the checkpoint prevents/cancels the call task.
- Messaging never implies the customer is delaying the deal unless explicitly verified and appropriate to communicate.

- AI never invents missing documentation or reasons for pending status.
- SOLD PENDING never auto-expires at Day 90 or another age threshold.
- Time alone never changes SOLD PENDING to CLOSED LOST.
- SOLD - DELIVERED and CLOSED LOST each immediately cancel all pending SOLD PENDING actions.
- Every queued action re-checks status and compliance immediately before execution.
- Channel opt-outs/invalid channels are respected without unnecessarily disabling other permitted channels.
