

AutoPulse.ai - SOLD - DELIVERED

Ownership & Retention Workflow - Final Developer Specification | September 2026

DEFINITIVE OPPORTUNITY STATUS RULE

The **ONLY two CLOSED opportunity statuses** are: CLOSED LOST and CLOSED - NO LONGER OWNS.

SOLD - DELIVERED is **not** a closed status. It remains an active ownership-lifecycle status until the customer confirms they no longer own the associated vehicle.

1. Opportunity Status Architecture

- **CLOSED LOST:** The opportunity is closed because the transaction/opportunity was lost. This is a terminal CLOSED status.
- **CLOSED - NO LONGER OWNS:** A previously SOLD - DELIVERED customer confirms they no longer own the vehicle associated with that opportunity. This is a terminal CLOSED status for that vehicle opportunity.
- **No other opportunity status is treated as CLOSED.**
- **SOLD - DELIVERED remains active** for ownership/retention purposes while the customer continues to own the associated vehicle.

Historical sale, delivery, service, and ownership data must remain preserved after an opportunity enters either CLOSED status.

2. SOLD - DELIVERED Trigger and Purpose

When an authorized dealership user changes an opportunity to **SOLD - DELIVERED**, all SOLD PENDING activity stops immediately and the ownership/retention lifecycle begins. SOLD - DELIVERED stays active until the associated vehicle ownership ends, unless another valid system event requires a different transition.

3. Lifecycle Summary

Trigger	Timing	Purpose
Post-Delivery Check-In	Day 3	Questions + offer first recommended service
Maintenance Reminders	Vehicle-specific / ongoing	Vehicle-database schedule -> service appointment
NHTSA Safety Recalls	Ongoing	VIN-specific safety recall -> service outreach
Customer Birthday	Annually	Relationship message using verified birth month/day
Ownership Anniversary	Annually, Years 1-10	Confirm whether customer still owns vehicle
Trade / Equity / Repurchase	NEXT SOW	Future valuation and repurchase engine

4. Day 3 - Post-Delivery Check-In + First Service

Approximately 3 days after delivery, AutoPulse checks in about the vehicle and offers to schedule the first recommended service.

VIN -> Vehicle Database -> Applicable Maintenance Schedule -> First Recommended Service -> Offer Appointment.

Intent: "Hi [First Name], we hope you are enjoying your new [Year Make Model]! Do you have any questions about your vehicle or anything we can help with? I can also get your first recommended service scheduled now so it is already taken care of."

- YES -> enter supported service scheduling workflow.
- LATER/NOT YET -> do not pressure; maintenance reminder engine remains active.
- Answer questions from verified data or escalate to the appropriate employee.
- Existing appointment suppresses redundant scheduling outreach for that service event.

5. Maintenance Reminder Engine - Vehicle Database

VIN -> Vehicle Database -> Applicable Maintenance Schedule -> Known Mileage and/or Time -> Recommended Service Due -> Outreach -> Service Appointment.

- Use verified mileage when available.
- If reliable current mileage is unavailable, use applicable time-based intervals and never present estimated mileage as known actual mileage.
- Never invent maintenance requirements.
- Completed service, outside service, or updated mileage should update/recalculate the workflow.
- If customer says they no longer own the vehicle, enter Section 8.

6. NHTSA Safety Recall Monitoring

VIN -> NHTSA Recall Check -> Applicable Open Safety Recall -> Customer Outreach -> Service Appointment.

- Recall workflow is independent of maintenance.
- Never claim a recall without VIN-specific authoritative support.
- Store recall identifier, description, detected date, status, source, and last-checked date.
- Use cadence controls to avoid repetitive outreach.
- Stop recall outreach if authoritative available data confirms completion/closure.
- Do not represent NHTSA safety recalls as manufacturer service campaigns unless supported by the data.

7. Customer Birthday

When verified birth month/day exists from an authorized source, send one relationship-focused birthday message annually.

Intent: "Happy Birthday, [First Name]! Everyone at [Dealership] wishes you a fantastic day!"

- Birthday is customer-level, not vehicle-level.
- Never infer/manufacture DOB.
- Do not automatically turn birthday outreach into a sales solicitation.
- Applicable suppression/opt-out rules apply.

8. Ownership Anniversary - Years 1 Through 10

Using each vehicle's original delivery date, send one ownership-anniversary message annually for 10 years.

Core question: "Happy anniversary with your [Year Make Model]! Do you still have your [Model]? Reply YES or NO."

YES

- Opportunity remains SOLD - DELIVERED.
- Vehicle remains ACTIVE ownership.
- Record ownership_confirmed_at.
- Continue maintenance, recall, and future anniversary workflows.

NO - Customer No Longer Owns Vehicle

Opportunity transition: SOLD - DELIVERED -> CLOSED - NO LONGER OWNS.

- Vehicle ownership status -> NO_LONGER_OWNED.
- Stop maintenance reminders, NHTSA recall outreach, and ownership-anniversary outreach for that vehicle.

- Preserve the original SOLD - DELIVERED history and all sales/service records.
- Ask: "Thanks for letting me know! What are you driving now?"
- Capture Year / Make / Model when provided.
- Ask: "Nice! About how long have you had your [Model]?" and capture approximate ownership duration/acquisition date.
- Ask naturally where they normally have the current vehicle serviced.
- Create/update current vehicle in Customer 360 as CUSTOMER_REPORTED.
- Do not automatically launch a trade solicitation; trade/equity/repurchase remains NEXT SOW.
- Recalculate customer ACTIVE/INACTIVE status.

NO RESPONSE

Do not change ownership or opportunity status solely because the customer did not respond.

9. Customer Status - ACTIVE / INACTIVE

CUSTOMER STATUS RULE

INACTIVE only when BOTH are true:

1. No open lead / open opportunity, AND
2. No currently owned vehicle.

ACTIVE when either condition exists: at least one open lead/opportunity OR at least one currently owned vehicle.

- No longer owns Vehicle A but owns Vehicle B -> customer remains ACTIVE.
- No currently owned vehicle but has an open lead/opportunity -> ACTIVE.
- No open lead/opportunity AND no currently owned vehicle -> INACTIVE.
- Unknown ownership is not confirmed zero ownership; missing data alone does not force INACTIVE.
- A new open opportunity or currently owned vehicle moves an INACTIVE customer back to ACTIVE.

10. Status Model

Level	Status	Meaning
Opportunity	SOLD - DELIVERED	Active ownership/retention lifecycle; NOT CLOSED
Opportunity	CLOSED LOST	Terminal CLOSED status: opportunity lost
Opportunity	CLOSED - NO LONGER OWNS	Terminal CLOSED status: sold customer no longer owns associated vehicle
Vehicle	ACTIVE	Customer currently owns vehicle
Vehicle	NO_LONGER_OWNED	Customer confirmed vehicle is no longer owned
Customer	ACTIVE	Open lead/opportunity OR currently owned vehicle exists
Customer	INACTIVE	No open lead/opportunity AND no currently owned vehicle

11. Replacement / Current Vehicle Data

- year, make, model
- VIN only from legitimate approved source
- approximate acquisition date / reported ownership duration
- ownership_status = ACTIVE
- vehicle_source = CUSTOMER_REPORTED

- ownership_confirmed_at / information_received_at
- normal_service_location when provided

Each vehicle has its own ownership record; a customer may have multiple historical or active vehicles.

12. AI / Communication Guardrails

- Read Customer 360, opportunity, vehicle, conversation, service, and appointment context before outreach.
- Never fabricate vehicle data, maintenance, mileage, recall status, appointment availability, ownership, or customer history.
- Update state and cancel stale queued actions after customer responses.
- Escalate questions requiring human expertise with full context.
- All outbound communication passes the AutoPulse Compliance Engine.
- Birthday/anniversary messages do not automatically require a human call task; human tasks are for actionable responses, service opportunities, escalations, or explicitly configured workflows.

13. Trade-In / Equity / Repurchase - NEXT SOW

OUT OF CURRENT SCOPE - ARCHITECTURE RESERVED. Future SOW defines valuation sources, trade values, equity/ownership logic, qualification rules, repurchase triggers, outreach cadence, and new sales-opportunity creation. Current workflow may collect current-vehicle and ownership-duration data but must not implement the future trade/equity engine.

14. Recommended Developer Fields / Events

- opportunity_status must support SOLD_DELIVERED, CLOSED_LOST, CLOSED_NO_LONGER_OWNS; **CLOSED_LOST and CLOSED_NO_LONGER_OWNS are the only closed values.**
- customer_status = ACTIVE | INACTIVE
- vehicle_ownership_status = ACTIVE | NO_LONGER_OWNED
- delivery_date; sold_delivered_at; closed_at; closed_reason; no_longer_owns_at; ownership_confirmed_at
- open_opportunity_count; active_owned_vehicle_count; customer_status_recalculated_at
- maintenance schedule/service appointment/recall/birthday/anniversary/replacement vehicle/escalation fields as defined above.

Suggested events: SOLD_DELIVERED, CLOSED_LOST, OPPORTUNITY_CLOSED_NO_LONGER_OWNS, POST_DELIVERY_CHECKIN_DUE, FIRST_SERVICE_OFFERED, SERVICE_APPOINTMENT_CREATED, MAINTENANCE_DUE, RECALL_DETECTED, BIRTHDAY_DUE, OWNERSHIP_ANNIVERSARY_DUE, OWNERSHIP_CONFIRMED, VEHICLE_NO_LONGER_OWNED, CURRENT_VEHICLE_REPORTED, CUSTOMER_STATUS_RECALCULATED, CUSTOMER_BECAME_ACTIVE, CUSTOMER_BECAME_INACTIVE, OPT_OUT_RECEIVED.

15. Developer Acceptance Tests

- System recognizes exactly two CLOSED opportunity statuses: CLOSED LOST and CLOSED - NO LONGER OWNS.
- SOLD - DELIVERED is not considered closed and remains in active ownership lifecycle.
- SOLD - DELIVERED cancels SOLD PENDING activity and starts ownership lifecycle.
- Day-3 check-in offers first-service scheduling using vehicle-database data.
- Maintenance uses vehicle-specific schedules; NHTSA recall workflow remains independent and VIN-specific.
- Birthday occurs annually only with verified month/day.
- Ownership anniversary occurs annually for Years 1-10.
- YES keeps opportunity SOLD - DELIVERED and vehicle ACTIVE.

- NO transitions opportunity to CLOSED - NO LONGER OWNS and vehicle to NO_LONGER_OWNED.
- CLOSED - NO LONGER OWNS stops vehicle-specific maintenance, recall, and anniversary outreach.
- Customer remains ACTIVE if any open lead/opportunity OR any currently owned vehicle exists.
- Customer becomes INACTIVE only when no open lead/opportunity AND no currently owned vehicle exist.
- Unknown ownership alone does not create INACTIVE status.
- New open opportunity/currently owned vehicle can reactivate an INACTIVE customer.
- Trade/equity/repurchase remains outside current SOW.
- Every queued action re-checks opportunity, customer, ownership, appointment, and compliance state before execution.
