

Project Scope: Workflows and Expected Flow

New lead to appointment, sale, delivery and ownership, with the compliance rules over all of it

What this document is. One place that states what the AutoPulse AI layer must do, taken only from the client's own documents and messages. Nothing has been added, reinterpreted or dropped. Where the client's documents disagree with each other, or leave a decision open, it's listed as a question in Section 17 rather than decided here.

How to use it. Each workflow section says what starts it, what happens step by step, what ends it, and the rules that apply. If a behavior isn't in this document, it isn't in this scope.

Version 1 · 30 September 2026

Sources: 4 client specifications, 1 workflow blueprint, 1 conversation-standards document, 3 client message threads (Section 1)

Contents

1	Sources	10	Workflow 6 · Response router and specific follow-up
2	The goal, in the client's words	11	Workflow 7 · Appointment, confirmation and no-show
3	The whole app at a glance	12	Workflow 8 · Sales Visit and manager outcome
4	Rules that apply everywhere	13	Workflow 9 · SOLD PENDING
5	Workflow 1 · Lead intake and classification	14	Workflow 10 · SOLD – DELIVERED ownership and retention
6	Workflow 2 · After-hours first contact	15	Workflow 11 · Compliance engine, opt-out and outbound campaigns
7	Workflow 3 · First quality response (Touch 1)	16	Statuses, data and out of scope
8	Workflow 4 · Active conversation	17	Questions for the client
9	Workflow 5 · No-response cadence, Days 1–91		

1. Sources

Every requirement in this document is traced to one of these. The short code in brackets is used in each section.

Source	Received	What it covers
Conversation standards [CS] conversations.md	24 Sep 2026	How the AI must talk: capture, interpret, leverage, advance to an appointment. Successful and failed examples for credit, trade-in, price/payment and service leads.
Sales lead blueprint [BP] autpulse.workflowblueprint.png	Before 25 Sep	End-to-end sales workflow: after-hours rule, intake, 3 lead buckets, new/used filter, 6-day no-response cadence, active conversation, 3 appointment asks, personalization, inventory feed, learning engine, escalation, channels.
Client messages, 25 Sep [M2] conversation_2.md	25 Sep 2026	After-hours choice; strict TCPA on outbound (DealerVault, drips, equity); the main goal is qualifying and booking the appointment, not escalating.
New Lead Follow-Up & Appointment Workflow – OMNICHANNEL FINAL [NL]	26 Sep 2026	Lead status state machine, Short-Term cadence Days 1–7, Days 8–90, Day 91, appointment, confirmation, no-show, Sales Visit, human call tasks, omnichannel rule.
TCPA & AI Communication Compliance Guardrails [TC]	26 Sep 2026	The compliance engine every send passes through (ALLOW / HOLD / REVIEW / BLOCK), consent evidence, opt-out, inbound vs outbound, time and frequency, AI voice, audit.
Client messages, 26 Sep [M3] conversation_3.md	26 Sep 2026	"These cadences will apply to ALL new lead buckets."
SOLD PENDING Workflow [SP]	29 Sep 2026	Follow-up between a sale and delivery: weekly for 4 weeks, then every 2 weeks, with no time limit.
SOLD – DELIVERED Ownership & Retention Workflow – FINAL [SD]	29 Sep 2026	Ownership lifecycle after delivery: Day 3 check-in, maintenance, NHTSA recalls, birthday, 10 yearly anniversaries; opportunity, vehicle and customer statuses.

Client messages, 29 Sep [M4] conversations_4.md	29 Sep 2026	SOLD PENDING and SOLD DELIVERED are "the two final workflows for this SOW"; service workflows are driven by NHTSA and vehicle databases.
--	-------------	--

Where two sources disagree, the newer, more specific specification is shown in the body, and the disagreement is listed in Section 17.

2. The goal, in the client's words

"Now here we might be missing the MAIN GOALS of always qualifying the customer AND leveraging the customer responses to schedule an APPOINTMENT. The goal is not to escalate every customer creating more work for the dealer and allowing the lead to go cold. We need to strike while the iron is hot and get the customer in the dealership."

[M2]

"Every new sales lead remains actively worked until contact produces a defined next action, an appointment, an opt-out/suppression event, a Sales Visit, or the opportunity reaches Day 91." [NL p.1]

"AI decides the next best customer action. The Compliance Engine decides whether AutoPulse is permitted to execute the communication." [TC §14]

The blueprint's core principles [BP]:

- **One goal:** earn the customer's response and their business.
- **Every lead ends in one of two places:** an appointment set within 72 hours, or a scheduled follow-up with a date and time.
- **Every touch:** personalize every interaction, earn the appointment, provide value.
- **TruthMode always:** every interaction is honest, transparent and customer-first.

3. The whole app at a glance

A customer's journey from the first lead to long-term ownership. Each numbered box is a workflow described later in this document. Two things apply at every step: the compliance engine, which checks every message before it goes out, and opt-out, which can happen at any time.

Figure 1 · End-to-end flow, lead to sale. What happens after the sale is Figure 3 (Section 12). The compliance engine and opt-out apply at every step.

4. Rules that apply everywhere

4.1 Compliance first: the AI never decides whether a message is legal

Every outbound message passes a deterministic compliance engine that returns ALLOW, HOLD, REVIEW or BLOCK. The AI and ordinary dealer users can't override BLOCK. The AI may never state, infer or change that a customer consented or may legally be contacted. [TC core rule, §10, §11] The full rules are in Workflow 11.

4.2 Every follow-up = CALL + TEXT + EMAIL (non-negotiable)

Whenever a follow-up is due, the AI sends a text **and** an email, and a human call task is scheduled 60 minutes later. If the customer makes meaningful contact within that hour, the call task is cancelled; if not, it becomes active for a person. Channels aren't alternatives. A channel is skipped only when it's unavailable, invalid, opted out or legally blocked, and every remaining permitted channel continues. [NL p.9–10; SP §3, §8]

Figure 2 · What happens at every follow-up touch, in every workflow

Where this applies: Days 1–7, Days 8–30 weekly, Days 31–90 monthly, specific follow-ups, appointment and confirmation touches, no-show touches, and SOLD PENDING touches. Birthday and anniversary messages don't automatically need a call task [SD §12].

Call tasks: they respect the agent's scheduled hours and days and the calling window (outside them, the task moves to the next eligible window). Each one shows the customer, the vehicle/opportunity, the last AI touch and the current status. They support Click-to-Call where available. After the call, the agent must pick an outcome: appointment → Appointment Set; a dated future action → Specific Follow-Up; contact but no next step → Contact Made – No Next Action; no contact → stays in the current flow; opt-out → suppression. [NL p.9]

4.3 One controlling workflow, and re-check before every send

- A customer/opportunity never runs two incompatible workflows at once. [NL §2]

- A status change cancels the old status's queued messages and call tasks before the new workflow starts. [NL §2]
- Immediately before any queued message or task runs, re-read the current status, reply, appointment, Sales Visit, suppression and compliance state. Nothing runs just because it was queued. [NL §2, §11; SP §12; SD §15]
- **Priority when events collide:** 1 opt-out / compliance block · 2 Sales Visit · 3 appointment set or updated · 4 specific follow-up · 5 no show · 6 contact made, no next action · 7 no contact made · 8 new lead. [NL §11]

4.4 Truthfulness: never invent

The AI never invents or assumes: availability, price, incentives, financing approval or terms, payments, trade values, vehicle facts, photos, OEM programs, dealer policy, urgency, service needs, maintenance requirements, mileage, recall status, missing documents, delivery dates, reasons a deal is pending, ownership, appointment availability or customer history. Price changes and OEM offers are used only when verified. Photos only come from an authorized inventory/media source for that vehicle. [CS; NL §13; SP §7; SD §12]

4.5 Context before every message

Before writing anything, the AI reads the full lead, conversation, notes, earlier questions, known vehicle and trade details, Customer 360 and DMS history, and current inventory/promotions. It never re-asks something already answered, unless confirmation is genuinely needed, and it varies its angles instead of rotating templates. [NL §4, §13; BP 4; SD §12]

4.6 Hours

- **TCPA:** the check happens before any outreach, in the customer's local time (blueprint: 8am–9pm; the TCPA spec requires a counsel-approved, versioned state rules table; see question 4). [BP 0; TC §7]
- **Business hours:** Day 1's 3-hour touch goes at 3 hours if that falls within business hours, otherwise at opening the next business day. "All other touches follow business hours unless customer replies." [BP 7]

4.7 Escalation

Escalate to a person immediately when the customer asks for a salesperson, indicates an urgent need or is upset. When the customer asks for a phone call, call within 5 minutes during business hours. All escalations are logged and tracked. [BP 8] Escalation isn't the default ending: the aim is the appointment. [M2]

4.8 Channels

Use the channel the customer came from when possible: SMS/text, email, phone call, web chat, social DM. "Stay consistent. Be responsive. Be human." [BP 9]

5. Workflow 1 · Lead intake and classification

Starts: a lead arrives from any source, day or night. **Ends:** AutoPulse knows who the customer is, why they submitted the lead and what they asked; the lead enters the cadence. [BP 1]

Steps

1. Capture the lead data, identify the source, read the raw comments, identify the customer's question, the vehicle (if any) and the likely intent, and collect the customer data available.
2. **Inbound or outbound.** Classify before any compliance check [TC §4; M2]:

Class	Example	Treatment
Consumer-initiated lead (inbound)	Customer submits an inquiry about a vehicle	Store lead source, time, dealer, channel and consent evidence; lead-response rules apply.
Outbound marketing	Dealer-started trade/equity, sales or promotional outreach; DealerVault drips	Full outbound compliance checks before enrollment and before each send. "TCPA US rules strictly enforced." [M2]
Service / transactional	Appointment confirmation, operational update	No promotional content that changes the nature of the message.
Historical-data campaign	Service interval or equity opportunity found in DMS/DealerVault	The data only identifies the opportunity; the compliance engine decides contactability separately.

3. **Sales lead bucket:** one of three, by source intent, before entering the workflow [BP 2]:

Bucket	Example sources	Word-track emphasis
1 · Credit / financing	Capital One, Chase, Carzing, DealerCentric, Credit Application, eUnifi, 700Credit	Financing options, pre-approval, payment structure, required information, how an appointment helps clarify real options.
2 · Trade-in / sell my car	KBB, TrueCar SELL My Car, AccuTrade, CarGurus SELL My Car	Value, appraisal, condition, payoff and equity, an accurate in-person number. Aggressively collect trade data.
3 · General sales	CarGurus, Edmunds, Cars.com, Facebook, Instagram, AutoWeb, CarsDirect, TrueCar (non-trade)	Availability, pricing, features, condition, history, alternatives, trade, financing, and whatever the lead comments show matters most.

The bucket sets intent and language, **not** the workflow: all three follow the same core workflow and cadences [BP; M3]. **Override:** if the customer's behavior shows a different intent, the conversation adapts in real time while the original bucket is kept for reporting.

4. **Vehicle type filter: new or used.** New: model/trim requested, OEM incentives, lease/finance programs, rebates, alternatives, incoming inventory, dealer trades, upgrade/loyalty. Used: specific VIN/stock number, exact availability, mileage/condition/history, CARFAX, similar used inventory, price changes/drops, alternatives if the unit sells. It's updated continuously as the customer changes, and the original is kept for reporting. [BP 2]
5. **Duplicate lead:** link or merge to the existing active customer/opportunity; never two workflows for one customer at once. [NL §15]

6. Workflow 2 · After-hours first contact

Starts: a lead arrives while the dealership is closed. [BP 0; M2]

"If a lead comes in after hours want a confirmation to be sent to the lead with the option for the customer to connect now or during business hours." [M2]

1. A contact-time / after-hours check runs first: the customer's local time, TCPA rules, consent and channel.
2. The first contact offers the choice: **help now** or **next business day**.
3. **Help now:** the AI acknowledges and continues the conversation immediately (the blueprint adds "if within TCPA allowed hours"; see question 3).
4. **Next business day:** the AI confirms the preference, schedules first contact for the next business day when the dealership is open, and stops outreach until then.
5. Then on to sales/service classification and the normal workflow.

7. Workflow 3 · First quality response (Touch 1)

Starts: immediately, or in the next eligible window, after a new lead. **Timing:** "within 60 seconds" [BP 3A].

Required structure [NL §3]

Hello {customer_first_name}, this is {agent_name} from {dealership_name} in {city}, {state}. Thank you for your interest in our {vehicle_year} {vehicle_model}. I am excited to help you with your purchase.
{AI_BEST_ANSWER_TO_LEAD_QUESTIONS} **Tell me, what are you driving now?**

- The AI reads the full lead first and answers the customer's questions or requests accurately before the final question.
- It **always** ends with "Tell me, what are you driving now?" [NL §3, §16]
- It never fabricates availability, pricing, financing, promotions, vehicle facts or dealer policy.

Vehicle link and image [BP 6]

For a lead tied to a specific vehicle, in this order: 1) vehicle link + image when both are available; 2) link only if no image; 3) image only if no clean link; 4) not tied to a specific vehicle → personalize around the customer's intent instead. Always verify the vehicle is active and available before sending media.

8. Workflow 4 · Active conversation

Starts: the customer replies at any point. Any queued no-response touch stops immediately. [BP 3A–B]

The five steps [BP 3B]

#	Step	Required behavior
1	Answer questions	Clear, honest answers to what they asked.
2	Identify intent, hot buttons and objections	Find out what matters most; surface concerns early.
3	Determine trade and fill missing data (mandatory)	Every sales customer ends with NO TRADE or HAS TRADE . If a trade: year, make, model, mileage, condition, payoff/loan, expected value (when relevant).
4	Assume ready now	The operating assumption is that the customer is ready now; change it only if they explicitly say otherwise and give a valid reason for delay.
5	Drive the appointment within 72 hours	Give a compelling, customer-specific reason to come sooner rather than later, never fake urgency.

Capture → Interpret → Leverage → Advance [CS]

"A customer answer should NEVER just become another stored field." For every meaningful answer: **capture** the fact, **interpret** what it says about their motivation, concern or goal, **leverage** it truthfully as the reason the next step helps them, and **advance** by asking for the appointment with specific options. Leverage isn't pressure.

Lead type	Collect	Turn it into the appointment reason
-----------	---------	-------------------------------------

Credit	Trade, mileage, payoff, down payment, credit concern	"Evaluate the trade, payoff and financing together so we can determine the actual options instead of guessing." Never promise approval.
Trade-in / sell	Mileage, payoff, condition/accidents, sell vs trade	Real appraisal compared with payoff and replacement options against their stated concern.
Price / payment	Trade, mileage, payoff, down payment, target payment	Make their payment target the objective of the appointment.
Service	Still owns it, current mileage, service done or not, the obstacle	Remove the obstacle (e.g. convenience); offer specific times; note their concern for the advisor.

Asking for the appointment: up to 3 times [BP 3C; CS]

1. **Attempt 1:** an appointment ask based on their primary intent and its value.
2. **Attempt 2:** a different approach, based on the hot button or objection.
3. **Attempt 3:** a different value proposition explaining why meeting sooner benefits them.
4. **Third rejection:** stop pushing, record the reason, and set a follow-up with a date and time.

Always with specific options ("5:15 today or 10:30 tomorrow"), never "let us know when you're ready."

Personalization and inventory [BP 4]

- **Personalize using:** lead source/bucket, customer data, vehicle of interest, raw comments and questions, trade info, previous touches, hot buttons, objections, behavior and timing; DMS history when available (purchases, service history, previous trades, service preferences, communication history).
- **Live inventory feed:** suggest similar or better-fit vehicles, alternative models and trims, vehicles in a similar price/payment range; alert the customer to new arrivals and price changes/drops; highlight recent and incoming inventory.
- **Positive outcomes only:** never just "not available"; keep the conversation moving with similar options, best-fit alternatives, upcoming inventory or price changes.

Learning and optimization [BP 5]

Track every touch: message strategy, lead source, timing, customer data, response or no response, appointment or no appointment. Learn which combinations get the most engagement and use them more often; A/B test wording, timing and strategies. "Goal of every touch: get the customer to respond."

9. Workflow 5 · No-response cadence, Days 1–91

Starts: New Lead, No Contact Made, Contact Made – No Next Action, or the end of the no-show sequence. The same for every bucket [NL §3; M3]. **Stops:** at any customer reply (to Active Conversation), an appointment, a Sales Visit, an opt-out, or Day 91. Every touch is call + text + email (Rule 4.2).

Days 1–7: Short-Term follow-up [NL §3]

Touch	When	Theme	Required behavior
1	Immediately / eligible window	Quality lead response	Section 7. Always ends "Tell me, what are you driving now?"
2	3 hours later; next eligible window if blocked	Name nudge	{FirstName}? "This is non-negotiable; do not replace with other sales copy."
3	Day 2	Vehicle visual	A useful vehicle photo and a simple vehicle question.
4	Day 3	Financing help	Ask if they need help with financing/payment options; no invented terms or approval.
5	Day 4	Trade-in	Ask about trade/appraisal using known context; never repeat an answered question.
6	Day 5	Vehicle value / feature	A verified feature, trim detail, use case or fact; photo when useful.
7	Day 6	Appointment value	A truthful reason to visit (appraisal, comparison, financing review, management review, right-team meeting) and ask for the appointment.
8	Day 7	Direct close	Ask if still considering; offer practical appointment options / what day works.

Human call tasks, Days 1–7: two per scheduled workday: a morning task in the agent's hours, and an afternoon task only if the lead is still in an eligible Short-Term status. A status change cancels the task. After the call, the outcome is required. [NL §3]

Days 8–90 and Day 91 [NL §4]

Period	Cadence	Angle
Days 8–30	1 outreach cycle per week (text + email + call)	A fresh, relevant angle: vehicle/photo, financing help, trade, verified inventory/trim, verified price change/OEM offer, appointment invitation.
Days 31–90	1 outreach cycle per month	Verified price/OEM changes, relevant inventory, trade/equity, financing help, renewed appointment invitation.
Day 91	Active cadence ends	The opportunity closes; the customer stays in the CRM with full history.

Angle selection: before each touch, read everything known and "choose the most relevant unused angle instead of blindly rotating templates."

Opportunity clock [NL §12]

opportunity_created_at never changes. Re-entering Short-Term can restart the cadence instance but never resets the Day 91 clock, and never sends duplicate same-day touches. Tracked: opportunity_age_days, workflow_entered_at, short_term_cycle_day, last_meaningful_contact_at, last_outbound_at, next_action_at, opportunity_closed_at.

10. Workflow 6 · Response router and specific follow-up

Response router [NL §5]

Event	Result
Reply + appointment created	Appointment Set → Appointment workflow
Reply, no appointment, no dated next action	Contact Made – No Next Action → Short-Term follow-up
Reply with clear future timing ("call me Friday / next month / in a year")	Contact Made – Specific Follow-Up
"Not ready" + week/month/year horizon	Future next action; Specific Follow-Up
Opt-out	Suppress the affected channel(s); stop prohibited outreach
Sales check-in	Sales Visit → manager outcome required
No response	Continue the eligible cadence until a transition or Day 91

Contact Made – Specific Follow-Up [NL §6]

Entry needs structured data "so neither AI nor human intent is lost": next_action_date (required), next_action_time (if known, else a dealer-configurable default), next_action_channel, next_action_owner (AI or human), context_notes, and entered_by + timestamp. At the scheduled time, the AI or person follows the notes; the appointment is still the goal. No response within 24 hours → No Contact Made → Short-Term. A future task can outlive Day 91: the opportunity closes, the task stays with the customer and may open a new opportunity when it's due.

11. Workflow 7 - Appointment, confirmation and no-show

Starts: any appointment created, by the AI or a person, sets Appointment Set and stops Short-Term/Specific follow-up. The AI books from the customer's answers ("I'll reserve 10:30 tomorrow for you") and notes what the team needs to know. [NL §2, §7; CS]

Appointment Set [NL §7]

When	Action
15 minutes after it's set	Text + email with the details, allowing time for correction: "{customer_first_name}, we are all set to meet on {appointment_date} at {appointment_time} at {dealership_name}, {dealership_address}. Please make sure to call or text us if anything changes at {ai_agent_phone}. Looking forward to assisting you!"
Each day before (not same-day)	A different vehicle photo + "Counting down to our meeting at {dealership_name}!"
Day before	Text + email: "Hello, {customer_first_name}, this is {agent_name} at {dealership_name} confirming our meeting for {date} at {time}. Does this time still work? Please reply Y for Yes or N for No."
Confirmed	<code>appointment.confirmed = true</code> ; the appointment report updates.
Appointment + 1 hour, no Sales Visit	Appointment No Show → no-show workflow.
Sales Visit on the appointment date	Sales Visit; <code>appointment.showed = true</code> ; the report updates, whatever the arrival time.

Same-day appointment: the 15-minute details go out when still useful; no countdown or day-before confirmation.

One active primary sales appointment per opportunity by default. [NL §7, §15]

Confirmation router [NL §8]

Response	Action
Y / clear yes	Mark confirmed; Appointment Set stays active.
N / clear no	Not confirmed. Immediately try to reschedule and capture a new date/time.
Ambiguous	Ask for clarification; not confirmed until clear.
No response	Stays scheduled but unconfirmed; normal logic continues.
Confirmed by phone	A person marks it confirmed; the report updates.
Rescheduled	Update it; cancel old confirmation and no-show timers; schedule against the new time. An old appointment can never create a false no-show.
Cancelled	Try to reschedule; with no new appointment or dated next action → Contact Made – No Next Action. [NL §15]

No-show [NL §9]

Step	When	Action
------	------	--------

1	Appointment + 1 hour	Text + email + vehicle photo: "Hello, this is {agent_name} with {dealership_name}. I am looking for you in the showroom - are you here and working with someone?"
2	24 hours later, no reply	Text + email: "Hi! This is {agent_name} at {dealership_name} regarding your {model} purchase. How did everything go when you came in? Did you get a chance to stop by?"
3	No response after step 2	Contact Made – No Next Action → Short-Term follow-up . Required business rule, "must not be changed to No Contact Made."
Any	Sales Visit logged	Stop the no-show flow; Sales Visit; mark showed if on the appointment date.

12. Workflow 8 · Sales Visit and manager outcome

Starts: the customer checks in at the dealership's SALES department. [NL §10]

1. Status becomes Sales Visit immediately.
2. All Short-Term, Specific, Appointment and No-Show follow-up stops.
3. If an appointment exists that calendar day, it's marked showed (even if the time differs), and the report updates immediately.
4. A manager outcome is **required**: **SOLD PENDING**, **SOLD DELIVERED** or **UNSOLD**.

Figure 3 · After the Sales Visit. UNSOLD has no defined next step yet (question 2).

13. Workflow 9 - SOLD PENDING

What it is: an active deal-completion status after a Sales Visit, when the deal is sold but the vehicle isn't yet delivered. "SOLD PENDING is not an unsold lead": it never enters the New Lead / Day 1–90 cadence. **Only two outcomes**, set by an authorized dealership user: SOLD – DELIVERED or CLOSED LOST. Nothing changes because of time: no Day-90 or any other expiry. [SP §1–2, §4, §6]

Cadence: every touch is text + email + call [SP §3–6]

When	Theme	What to ask
Week 1	Documentation + questions	Have they provided everything the salesperson requested? Any questions about the purchase? Never assume a specific missing document.
Week 2	Support check-in	Anything they need from the salesperson or dealership? Any questions come up?
Week 3	Purchase / vehicle check-in	Help with vehicle or purchase questions; verified, relevant items only (trade, insurance, paperwork, features, accessories).
Week 4	Relationship check-in	Warm and neutral: <i>"We just wanted to stay in touch while your purchase is being completed. Do you have any questions about your vehicle or is there anything our team can help you with at this time?"</i>
Every 2 weeks after	Ongoing	Questions? Anything needed? Where appropriate, do they have everything requested? Use deal context; never repetitive.

Rules [SP §7, §9–10]

- Never imply the customer is delaying the deal, and never pressure them to take delivery.
- Sound like a continuation of an existing purchase, not a new sales pitch.
- Never invent documents, delivery dates, vehicle or financing status, approvals, dealership actions, or reasons the deal is pending.
- Answer from verified context; questions needing a salesperson, manager, finance, title, trade or insurance are escalated to a person with context.

Event	Action
Question the AI can answer	Answer from verified context; record; stay SOLD PENDING.
Needs a person	Create an escalation/task with the question and context; stay SOLD PENDING.
Customer provides requested info	Record it; route to the right dealership user; stay SOLD PENDING.
Dealer records delivery	Immediately SOLD – DELIVERED; cancel all SOLD PENDING actions.
Dealer records the deal lost	Immediately CLOSED LOST; cancel all SOLD PENDING actions.
No response	Continue the weekly or two-weekly cadence.

14. Workflow 10 · SOLD – DELIVERED ownership and retention

Definitive status rule [SD]

The ONLY two CLOSED opportunity statuses are **CLOSED LOST** and **CLOSED – NO LONGER OWNS**. SOLD – DELIVERED is **not** closed: it stays active until the customer confirms they no longer own the vehicle. History is always kept.

Starts: an authorized dealership user sets SOLD – DELIVERED. All SOLD PENDING activity stops immediately. [SD §2]

Trigger	Timing	What happens
Post-delivery check-in	Day 3	VIN → vehicle database → maintenance schedule → first recommended service → offer appointment. <i>"Hi [First Name], we hope you are enjoying your new [Year Make Model]! Do you have any questions about your vehicle or anything we can help with? I can also get your first recommended service scheduled now so it is already taken care of."</i> YES → service scheduling. Later/not yet → no pressure; reminders stay active. An existing appointment suppresses the offer.
Maintenance reminders	Per vehicle, ongoing	VIN → schedule → known mileage and/or time → service due → outreach → service appointment. Verified mileage when available; otherwise time-based intervals, never estimated mileage presented as actual. Never invent requirements. Completed, outside or updated-mileage service recalculates.
NHTSA safety recalls	Ongoing	VIN → NHTSA recall check → open recall → outreach → service appointment. Independent of maintenance; never claim a recall without VIN-specific authoritative support; store id, description, detected date, status, source, last-checked date; stop when closed; cadence controls; not presented as a manufacturer campaign unless the data says so.
Birthday	Yearly	Only with a verified birth month/day from an authorized source. <i>"Happy Birthday, [First Name]! Everyone at [Dealership] wishes you a fantastic day!"</i> Customer-level; never a sales pitch.
Ownership anniversary	Yearly, years 1–10	From each vehicle's delivery date: <i>"Happy anniversary with your [Year Make Model]! Do you still have your [Model]? Reply YES or NO."</i>
Trade / equity / repurchase	—	Next SOW. Architecture reserved only.

Anniversary answers [SD §8]

- **YES:** stays SOLD – DELIVERED; vehicle stays ACTIVE; record `ownership_confirmed_at`; maintenance, recalls and anniversaries continue.
- **NO:** opportunity → CLOSED – NO LONGER OWNS; vehicle → NO_LONGER_OWNED; stop that vehicle's maintenance, recall and anniversary outreach; keep all history. Then ask "Thanks for letting me know! What are you driving now?", "Nice! About how long have you had your [Model]?", and where they normally get it serviced. Save it in Customer 360 as `CUSTOMER_REPORTED`. No automatic trade pitch. Recalculate the customer's status.
- **No response:** nothing changes.

Customer status [SD §9]

INACTIVE only when both: no open lead/opportunity **and** no currently owned vehicle. Otherwise ACTIVE.

Unknown ownership never counts as zero. A new open opportunity or owned vehicle makes an INACTIVE customer ACTIVE again. Each vehicle has its own ownership record.

15. Workflow 11 - Compliance engine, opt-out and outbound campaigns

Every outbound message, from any workflow, passes this gate before delivery [TC §1]:

Customer → Dealer → Purpose → Channel → Consent/Evidence → DNC & Suppression → State/Local Time → Frequency → Compliance Decision → Delivery

Decision	Meaning [TC §11]
ALLOW	All checks pass; the message may be sent.
HOLD	Maybe later; queued until the next compliant time/condition, and never released before it.
REVIEW	Evidence or classification is ambiguous; no automated marketing until a person resolves it.
BLOCK	Prohibited; the AI and users can't force-send it.

Required controls [TC §1-9]

- **Consent:** a phone number alone is never permission. Evidence is kept and can't be edited: source, time, seller/dealer, disclosure text and version, phone, lead form, evidence id. A lead provider's bare `consent=true` isn't enough; missing evidence → `CONSENT_REVIEW_REQUIRED`, no automated marketing.
- **Per dealer:** permission and suppression belong to that dealership, not to AutoPulse as a whole.
- **DNC / suppression:** national DNC requirements plus dealer and platform suppression before covered outbound marketing.
- **Opt-out:** STOP, END, CANCEL, UNSUBSCRIBE, QUIT, and natural language ("don't text me", "don't call me", "leave me alone", "remove my number", "take me off your list", "no more messages") suppress immediately. "I'm not interested" can be an objection rather than an opt-out: if it's ambiguous → REVIEW, and marketing stops. An opt-out confirmation, if sent, is non-marketing. Opt-outs are tracked per channel (SMS, email, call) plus a broad do-not-contact. [TC §3; NL §15]
- **DMS / DealerVault:** presence in the DMS never creates consent. The data can identify an opportunity (service interval, equity); the engine decides separately.
- **Time:** the customer's jurisdiction and local time before every covered outbound attempt, from a counsel-approved, versioned state rules table; outside it → HOLD with the next time.
- **Frequency:** caps enforced outside the AI and checked again at send time.
- **AI voice:** a separate, higher-risk channel; outbound AI voice stays disabled until counsel approves.
- **Audit:** every attempt logs its inputs, decision, reason/rule version, template and delivery result. Deleting or re-importing a customer never erases suppression history.

Other channel problems [NL §15]

- **Wrong person / bad number:** a data-quality suppression; never continue outreach to a known-wrong number.
- **Hard-bounce email:** suppress that email; other permitted channels continue.
- **Photo unavailable:** never a fabricated or unrelated photo; approved alternate media or no photo.

16. Statuses, data and out of scope

Every status in this scope

Level	Status	Meaning
Lead	New Lead	Lead received; enters Short-Term follow-up.
Lead	No Contact Made	No meaningful two-way contact; Short-Term.
Lead	Contact Made – No Next Action	Contact, but no appointment or dated next action; Short-Term.
Lead	Contact Made – Specific Follow-Up	A defined future action with date/time/channel/owner/notes.
Lead	Appointment Set	A valid appointment exists.
Lead	Appointment No Show	Appointment + 1 hour with no Sales Visit.
Lead	Sales Visit	Customer checked in at SALES; manager outcome required.
Lead	Opted Out / Suppressed	A revocation or suppression event; prohibited channels stop.
Lead	Opportunity Closed – No Response	Day 91 with no superseding outcome (see question 1).
Opportunity	SOLD PENDING	Sold, not yet delivered; active; no time expiry.
Opportunity	SOLD – DELIVERED	Active ownership lifecycle; not closed .
Opportunity	UNSOLD	A manager outcome after a Sales Visit; next step not defined (question 2).
Opportunity	CLOSED LOST	Terminal: the opportunity was lost.
Opportunity	CLOSED – NO LONGER OWNS	Terminal: the customer no longer owns the sold vehicle.
Vehicle	ACTIVE / NO_LONGER_OWNED	Per vehicle ownership record.
Customer	ACTIVE / INACTIVE	INACTIVE only with no open opportunity and no owned vehicle.

Event lists the client recommends: NL §14, SP §11, SD §14. Field lists: NL §6, §12; TC §2, §6, §11; SP §11; SD §11, §14.

Out of scope for this SOW

- **Trade-in / equity / repurchase engine:** the next SOW. Current-vehicle and ownership-duration data may be collected but not acted on. [SD §13]
- **Automated outbound AI voice:** disabled until counsel approves. [TC §9]
- **Legal approval:** the 50-state rules table, consent/disclosure wording, DNC procedure and similar items are supplied or approved by TCPA counsel; the spec "is not legal advice". [TC §13]
- **What happens after a manager outcome beyond Sections 13–14** and any further service workflows are defined in later documents. [NL §17; M4]

17. Questions for the client

Places where the client's own documents disagree, or where a behavior is required but not fully defined. Each needs one answer before it's built. Nothing here has been decided on the client's behalf.

#	Question	Why it's open
1	Day 91: does "Opportunity Closed – No Response" still exist, or does Day 91 become CLOSED LOST?	NL §1 has it as a status; SD says the ONLY two closed statuses are CLOSED LOST and CLOSED – NO LONGER OWNS.
2	UNSOLD: what happens after a manager picks UNSOLD: back into follow-up, or CLOSED LOST?	NL §10 requires UNSOLD as an outcome; SP and SD don't define it.
3	After hours, "help now": does the conversation continue at any hour, or only within TCPA hours?	M2: "if he says yes i need it now then it will start communication right away." BP 0: "continues the conversation immediately (if within TCPA allowed hours)."
4	Contact hours: 8am–9pm customer time everywhere, or the counsel-approved state table (some states are stricter)? Who supplies the table, and when?	BP 0 says 8am–9pm; TC §7 says don't hard-code one window; use a versioned state table.
5	Initial cadence: 7 days / 8 touches (NL) or 6 days / 7 touches (BP)? Touch 2 wording "{FirstName}?" (NL) or "Hi [Customer Name]?" (BP)?	The two documents differ. NL is newer and marked FINAL; please confirm it replaces the blueprint's cadence.
6	Touch 1 ending: must it <i>always</i> end "Tell me, what are you driving now?", even after hours (when it also offers "now or next business day") and when the customer already asked to come in?	NL §3 says ALWAYS; BP 0 and BP 3B also ask the first message to offer the after-hours choice and to drive the appointment.
7	Touch 2 by email: does "{FirstName}?" also go by email (and with what subject), given every follow-up is text + email + call?	NL §3 defines Touch 2 as a text; NL p.10 says every follow-up is text + email + call.
8	Call tasks: are the Days 1–7 "two call tasks per workday" separate from the 1-hour call task after each touch, or the same tasks?	NL §3 and NL p.9 both create call tasks on Days 1–7.
9	Where do call tasks, statuses and reports live? Agents need a task list with Click-to-Call and an outcome prompt; managers need the appointment/showed report and the manager-outcome prompt.	NL §3, §7, §10 and p.9 require screens for staff. Please confirm these are in the dealer platform's scope for this SOW.
10	"Meaningful contact": what counts? A reply of any kind, "ok", an auto-reply, a STOP, a bounce?	It cancels call tasks and changes statuses (NL p.9, SP §3), but isn't defined.
11	No-contact routing: please confirm both, since they route differently: a specific follow-up with no reply in 24h → No Contact Made ; a no-show with no reply → Contact Made – No Next Action .	NL §6 vs §9 (the spec itself flags the no-show wording and keeps it as a required rule).
12	When does New Lead become No Contact Made? After Touch 1, Touch 2, or the end of Day 1?	NL §1 names both statuses but not the moment of change.

13	15-minute appointment message: if the dealer system already sends a booking confirmation, should the 15-minute message replace it, or be sent too?	NL §7 requires it; the platform currently sends its own on booking, so the customer would get two.
14	Sales Visit check-in: how is "customer logged into dealership SALES" recorded: a check-in system, or staff setting a status?	NL §1, §10 depend on it for showed/no-show.
15	Maintenance and birthday data: which "vehicle database" provides maintenance schedules, and which authorized source provides birth dates?	SD §4–5, §7 require them; M4: "NHTSA and vehicle databases will dictate those."
16	Service appointments: are service appointments booked by the AI in this SOW (Day 3 first service, maintenance, recalls), and into which calendar?	SD §4–6 and CS example 4 end in a service appointment.
17	Web chat and social DM: are these channels in this SOW?	BP 9 lists them; no specification defines them.
18	Phone-call request: "call within 5 minutes during business hours". Is this a call task for staff (same mechanism as question 9)?	BP 8.
19	National DNC: should numbers be checked against the national Do-Not-Call registry (a paid service), or is consent + internal suppression enough?	TC §1 lists "National DNC requirements"; counsel to confirm (TC §13).
